

RCRA has asked that the Removal Program provide some assistance at these sites. The assistance involves sampling and analyses and may result in some other actual removal actions. **Logistics permitting, Initial Recon Visits are anticipated the week of June 19, 2017 at each of the following sites.**

**Walker Wood Treaters site:** is located approximately four miles south of **Livingston, Texas** at 4683 Highway 146. It has 14 tanks in the tank farm ranging up to 30,000 gallons in size (contents and volumes unknown) and a 92 foot long pressure treatment vessel that the previous owner claims is still half full of creosote. The company used Creosote, Pentachlorophenol (PCP), and Copper Chromated Arsenic (CCA) to treat wood. The request for assistance from the RCRA program is to sample and gauge the tanks and vessels to determine the nature and volumes of each.

**Wood Industries:** is a 50 acre "recycling facility" or above ground landfill as characterized by the Texas Commission on Environmental Quality (TCEQ), which is owned and operated by Thomas P. Wood. The facility is located in Southern **San Antonio, Texas** at 11373 Southton Rd. The operators salvaged lead batteries from 1958 until 2002 when they stopped accepting shipments into the facility. Previous investigations show high concentration of lead. The Initial Site Recon by the OSC will be with the current owner, the grandson of the previous owner/operator.

**F.J. Doyle Salvage:** The facility is located at 305 E. Cottonwood Street, **Leonard, Fannin County, Texas**. The facility salvaged electrical transformers which lead to polychlorinated biphenyls (PCBs) contamination in the soil. Residential properties are surrounding the Site.

**US Cooling Towers:** The Site is a former manufacturer located at 1200 N Date ST, **Plainview, Hale County, Texas**. Chromium and arsenic have been found in surface soil samples. The area surrounding the facility is mixed industrial, residential and agricultural.
